

## White-Box Testing of Authentication Middleware & Role-Based Authorization

| TEST CASE ID | TESTED CODE SEGMENT          | TEST DESCRIPTION                               | INPUT VALUES                                                   | EXPECTED BEHAVIOR                                                                                      | ACTUAL BEHAVIOR         | RESULT |
|--------------|------------------------------|------------------------------------------------|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|-------------------------|--------|
| TC-WAuth001  | Middleware:<br>verifyToken() | Authorization header missing validation        | headers: {}                                                    | System intercepts request and returns 401 Unauthorized with "Missing or invalid authorization header". | Matches expected output | Pass   |
| TC-WAuth002  | Function:<br>generateToken() | Citizen & Admin JWT token signature generation | user_id="usr-101",<br>role="citizen",<br>barangay_id="brgy-05" | Generates valid JWT signature encoding user ID, role, and barangay context into token payload.         | Matches expected output | Pass   |

### EVIDENCES:

Figure 1: Tested Code Snippet for Authentication Middleware & Role-Based Authorization

```
const createMockResponse = () => {  
  // ...  
};  
  
test('TC-WAuth001: verify_header - should return 401 error if Authorization header is missing', () => {  
  const req = { headers: {} };  
  const res = createMockResponse();  
  let nextCalled = false;  
  const next = () => { nextCalled = true; };  
  
  verifyToken(req, res, next);  
  
  expect(res.statusCode).toBe(401);  
  expect(res.jsonBody.success).toBe(false);  
  expect(res.jsonBody.message).toBe('Missing or invalid authorization header');  
  expect(nextCalled).toBe(false);  
});  
  
test('TC-WAuth002: login_verification - should attach decoded payload to req.user for valid token', () => {  
  const userPayload = { user_id: 'usr-888', role: 'admin' };  
  const validToken = jwt.sign(userPayload, JWT_SECRET);  
  
  const req = { headers: { authorization: `Bearer ${validToken}` } };  
  const res = createMockResponse();  
  let nextCalled = false;  
  const next = () => { nextCalled = true; };  
  
  verifyToken(req, res, next);  
  
  expect(req.user).toBeDefined();  
  expect(req.user.user_id).toBe('usr-888');  
  expect(req.user.role).toBe('admin');  
  expect(nextCalled).toBe(true);  
});  
});
```

Figure 2: Terminal Output of Successful Authentication Testing

```

(Use `node --trace-warnings ...` to show where the warning was created)
PASS src/middleware/authMiddleware.test.js
  Test Suite: Authentication
    ✓ TC-WAuth001: verify_header - should return 401 error if Authorization header is missing (7 ms)
    ✓ TC-WAuth002: login_verification - should attach decoded payload to req.user for valid token (11 ms)
